6 x 35mm PDW—Personal Defense Weapon

In order to meet the growing need for a Personal Defense Weapon with maximized lethality yet minimal size, weight, and signature, the 6mm PDW from Knight's Armament Company has been designed around the new 6 x 35mm cartridge. This new round penetrates body armor to 300 meters, minimizes muzzle flash through a highly efficient propellant and offers more kinetic energy than a 5.56mm round when fired from the same barrel length. The PDW with its standard 10-inch barrel has been designed for optimized lethality.

Caliber	6 x 35mm
Weight empty	4lb 8oz
Magazine capacity	30 rounds
Length overall	28"
Length folded	19.5"
Barrel lengths	10" / 8"
Muzzle velocity	2425 f/s

Gas operated piston, rotary bolt

The internal components are designed for rapid field stripping and no-tools disassembly. The controlled motion of the lightweight operating group results in a low recoil system that provides maximum controllability and accuracy even with full automatic fire.

With its folding buttstock and two available barrel lengths—10 inches and 8 inches, the PDW is a weapon that can easily be deployed from a vehicle or used in any confined space. Four Picatinny rails provide for a wide choice of mounting locations for optical sights, vertical grips, and other accessories.
